

A2O Pure Replacement Filters

A2O Pure DWRO®

Powered by Aquaporin Inside®

The DWRO® membrane powered by Aquaporin Inside® is the only drinking water reverse osmosis membrane in the world that uses aquaporins – nature's own water filters – to purify water. The result is refreshing, high-quality, and great-tasting water that is purified just as nature intended it.

The Aquaporin Inside® DWRO® (drinking water reverse osmosis) membrane filters out 90-99% of all dissolved solids and contaminants in tap water, including PFAS, pesticides, heavy metals, microplastics, bacteria, viruses, dissolved salts, and hardness.

Technical specifications

Material	Aquaporin Inside® DWRO®
Lifetime	24 months or 7,000 L*

* The limit value that is reached first determines when you replace the filter. The durability of filters & membranes or the amount of water filtered depends on the quality of the input water. The less contaminated the longer the filter media will last!

Filter replacement guide

The entire filter replacement guide is available in the use and installation guide online:
